ABOUT ME

I am a highly experienced Software Engineer with over 2 years of expertise in Java, Spring, Python, ReactJs, and AWS cloud solutions, with a strong focus on designing scalable, resilient applications for enterprise customers. I specialize in Design Patterns, OOP Concepts, SOLID principles, Microservices, and Serverless Architectures, Event-driven Architecture, allowing me to build modular, scalable, and maintainable solutions. And also have experience with JPA/Hibernate for efficient ORM, Docker for containerization, and CI/CD pipelines to streamline automated deployments, ensuring seamless code integration and delivery. I have a solid history of collaborating with diverse development teams during the software development lifecycle (SDLC). I greatly enjoy meeting new people, being part of a team, and working towards a common goal where I can excel personally and contribute to the team's overall success.

SKILLS

Java (computer programming) / JAVA (Spring Framework, SpringBoot, REST, Hibernate, JPA, JDBC, JAX-RS, Maven, Gradle) / Spring Security(JWT) / MySQL / Databases: MySQL, MariaDB, PostgreSQL, MongoDB / GCP, AWS-S3, AWS-EC2, AWS-Lambda / Object-Oriented Programming / manage supplies / Github / Web Development / RESTful api / JavaScript / react to emergency situations in a live performance environment

WORK EXPERIENCE

Associate software engineer

[03/01/2023 – Current]

City: Maharagama | **Country:** Sri Lanka

The Inventory Management System provides an end-to-end automated solution for procurement, stock tracking, and distribution. It encompasses inventory ingestion, real-time processing, dynamic stock updates, and seamless integration with procurement and sales platforms. Once inventory data is ingested, it synchronizes with frontend dashboards and third-party logistics tools, ensuring accurate supply chain management.

Inventory Delivery Service – Streamlined the automated stock fulfillment process, significantly reducing shipment delays and improving warehouse efficiency.

- Managed real-time inventory allocation, implemented smart replenishment rules, tracked cross-channel stock flows, processed fulfillment events through Spring Cloud Stream, and configured CloudWatch alerts for stockouts.
- Technologies Used - Java EE, Spring Boot/Cloud, Feign Client, Web Client, Resilience4j, SQS, MySQL, MongoDB, Hibernate/JPA, AWS (S3, ECS, ECR), Docker, Kibana, JWT.

Inventory Management Service - Dedicated to automating and optimizing stock control processes for retail and e-commerce platforms. Developed as a Spring Boot microservice deployed on AWS ECS, it provides realtime inventory updates either through batch S3 processing or direct API integration.

- Notable enhancements include AI-powered stock allocation, automated replenishment triggers, multiwarehouse synchronization, and dynamic threshold alerts.
- Additionally, incorporated JWT-based security and role-based access control for secure inventory modifications.
- Implemented event-driven architecture using Spring Cloud Stream for real-time inventory updates across distributed systems.
- Technologies used: Java EE, Spring Boot/Cloud, AWS (S3, ECS, ECR, SQS), Docker, MySQL, MongoDB, Hibernate/JPA, Kibana, Resilience4j.

Implemented Inventory Optimization Service - As part of a comprehensive supply chain modernization initiative to replace legacy inventory tracking systems and integrate a real-time stock management platform, significantly reducing stock discrepancies and manual reconciliation efforts. This transformation enhances operational efficiency and automates replenishment workflows.

- Utilizing technologies such as Java, Spring Boot, Spring Cloud Stream, AWS SQS, S3, ECS, and Docker.

Collaborated on implementing the Continues publication Integration REST API Service a suite of integrated API services tailored for Gutenberg. Developed a suite of integrated API services for the External Content Editor tool.

- Collected and transformed Table of Content data, managed data persistence in internal and external repositories, and ensured smooth integration with the content authoring tool - Gutenberg.
- Technologies used: Java, Spring Boot, SQS, Tibco EMS, concurrency processing, Global Exception handler, REST service, Feign client, Web client, Circuit Breaker, and Microservices, ECS, ECR, Farget, Docker.

EDUCATION AND TRAINING

Transport and logistics Management

University of Moratuwa [13/03/2017 – 10/07/2022]

City: Moratuwa | Country: Sri Lanka | Website: <https://uom.lk/>

RECOMMENDATIONS

Name: Ayona Darshani | Associate Tech Lead, 7 Needle (PVT) Ltd
